

## **The Endocrine-Disrupting Chemicals Exposure Elimination Act of 2011**

The Act addresses one of the most serious threats to the security and economy of our country: the health and well-being of our children who today face mounting odds of being born with an endocrine-related disorder.

**The Endocrine-Disrupting Chemicals Exposure Elimination Act of 2011** propels the rigorous, 21st Century health research being done through the National Institute of Environmental Health Sciences to the forefront of regulatory decision making. It facilitates cooperation between the NIEHS, the Environmental Protection Agency, and other regulatory agencies to reduce exposure to chemicals identified as endocrine disruptors.

This Act is essential to facilitate and strengthen current chemical legislation such as the Safe Drinking Water Act, the Clean Water Act, and the Clean Air Act, and new legislation such as the Safe Chemicals Act of 2011, the Endocrine Disruptor Screening Enhancement Act of 2010, and others.

Please contact your Senators and Members of the House of Representatives and ask them to cosponsor **The Endocrine-Disrupting Chemicals Exposure Elimination Act of 2011**.
